

ForeSea – The Ocean Prediction Capacity of the Future

Vision: Strong international coordination and community building of the ocean prediction capacity for the future.

Overarching goals

- Improve the science, capacity, efficacy, use, and impact of ocean prediction systems.
 - Build a seamless ocean information value chain, from observations to end users, for economic and societal benefit.
- => make ocean prediction science more impactful and relevant.

Lead institution: OceanPredict (OceanPredict.org)
Co-Chairs: E. Chassignet, F. Davidson, Vinayachandran P.N.

ForeSea: Transformative and beyond “business as usual”

- Democratization of ocean information to enable more impactful engagement
- Creation of an effective and sustainable operational oceanography ecosystem environment responsive to user needs.
- Establishment of a framework for operational oceanography that enables scientists and stakeholders to engage and collaborate with
 - all components of the value chain and
 - the UN Decade programmes associated with these components
- Enhancement of communication of the impact and relevance of ocean prediction

Update - 1

1. Creation of an advisory committee: Next meeting will take place later this summer to go over the recommendations of the OceanPredict task teams on how best to promote and act on ForeSea's objectives.
2. On-going discussion on establishing a ForeSea project office (ideally two persons – Eurasia/Africa and America/Pacific)
3. Working toward the goal of establishing a portal (collaboration with OP DCC) that would
 - a) summarize the international status and availability of ocean assimilation and prediction (blue and green - global, regional, and coastal) with regular updates of capacity, i.e. communications – conversation with the new OP operational systems working group
 - b) provide a description of available resources (observations and models) and how to access them
 - c) have tutorials on basic setups of models and data assimilation as well as their limitations
 - d) linkages and collaborations with other Decade programmes (linkages with CoastPredict, ObsCoDe, DITTO, MarineLife2020, etc.)
 - e) be in place by the OceanPredict/ForeSea '24 conference

Update -2

Two projects hosted by ForeSea

- 1) **Synergistic Observing Network for Ocean Prediction (SynObs)** by MRI Japan - SynObs is being proposed as a common comprehensive Decade Project to the three Decade Programmes, ForeSea, CoastPredict, and Observing System Co-Design. SynObs will seek to extract maximum benefit from combining various observation platform measurements, typically satellite and in situ observation data, or combinations of coastal and open ocean platforms for ocean/coastal predictions.
- 2) **Integrating Coastal Hazard Warning Systems for the Tropical Americas and Caribbean (TAC)** by UNESCO IOC IOCARIBE - Co-Design, Co-Production and Co-Delivery of Integrated Multiple Coastal Hazard Early Warning System and Services for the Tropical Americas and Caribbean. The project will prioritize the integration of existing and new coastal hazards early warning systems and services considering four components: Monitoring and Warning, Risk Knowledge, Warning Dissemination and Communication, and Response Capabilities, supported by capacity development.
