

# Marine Ecosystem Analysis and Prediction (MEAP) Task Team

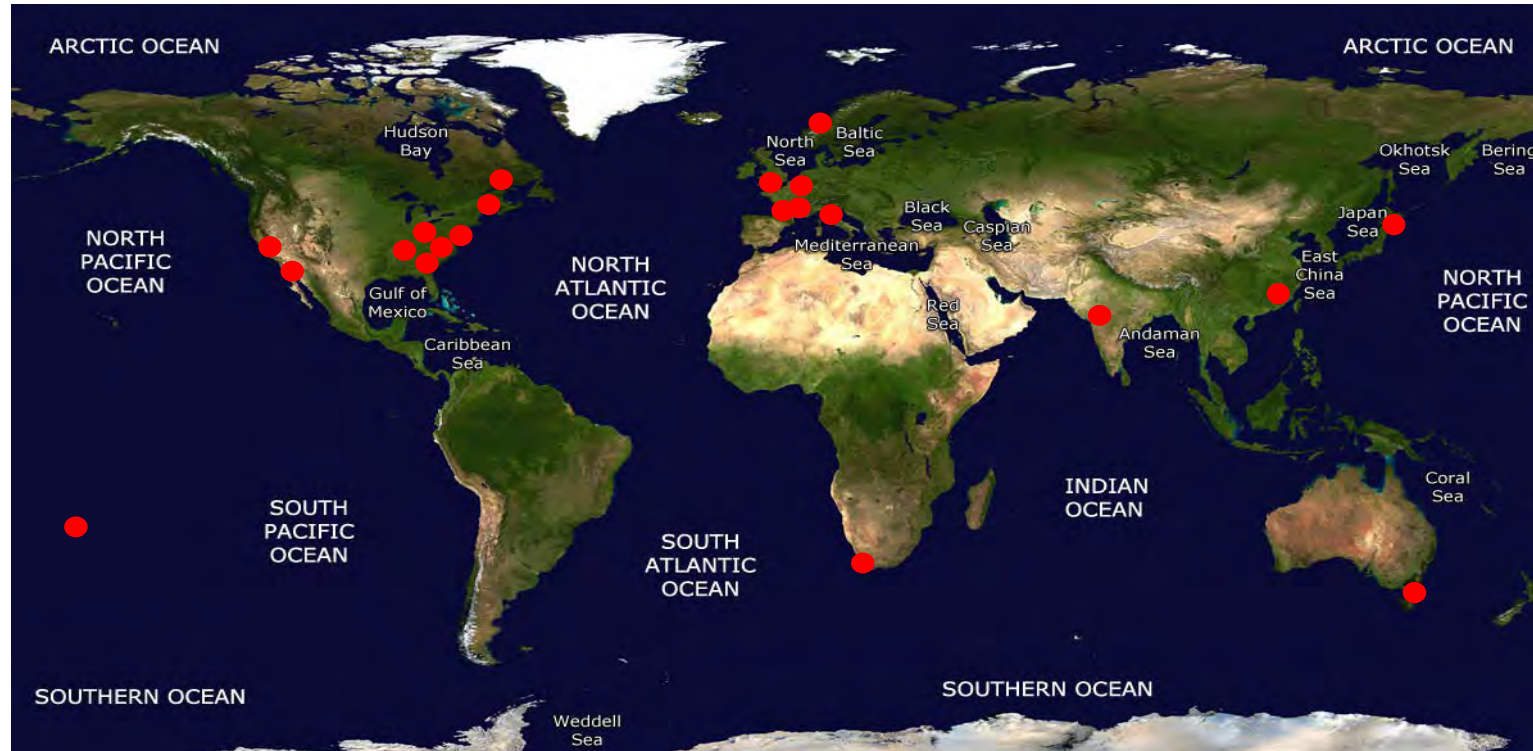

Co-chairs:

Liuqian Yu (HKUST(GZ)), Stefano Ciavatta (MOi), Marjorie Friedrichs (VIMS, step-down)

Patron: Paul Di Giacomo (NOAA, USA)

**28 members**

**21 institutes**

**12 countries**

## Mission

Advancing the underpinning science and tools for integration of biogeochemical and ecosystem models into **operational** systems.

## “Operational”

- Hindcasts/reanalyses
- Short-term (days to weeks) & seasonal (months) forecasts
- Climate change projections
- Scenario simulations

## Applications

### 1) Carbon cycle research & carbon accounting

- Quantification of carbon fluxes
- Sensitivity of carbon fluxes to climate forcing
- National carbon accounting

### 2) Marine ecosystem health and productivity

- Fisheries management
- Conservation of endangered species
- Design of MPAs (marine protected areas)
- Marine health indicators (eutrophication, acidification, deoxygenation, ...)

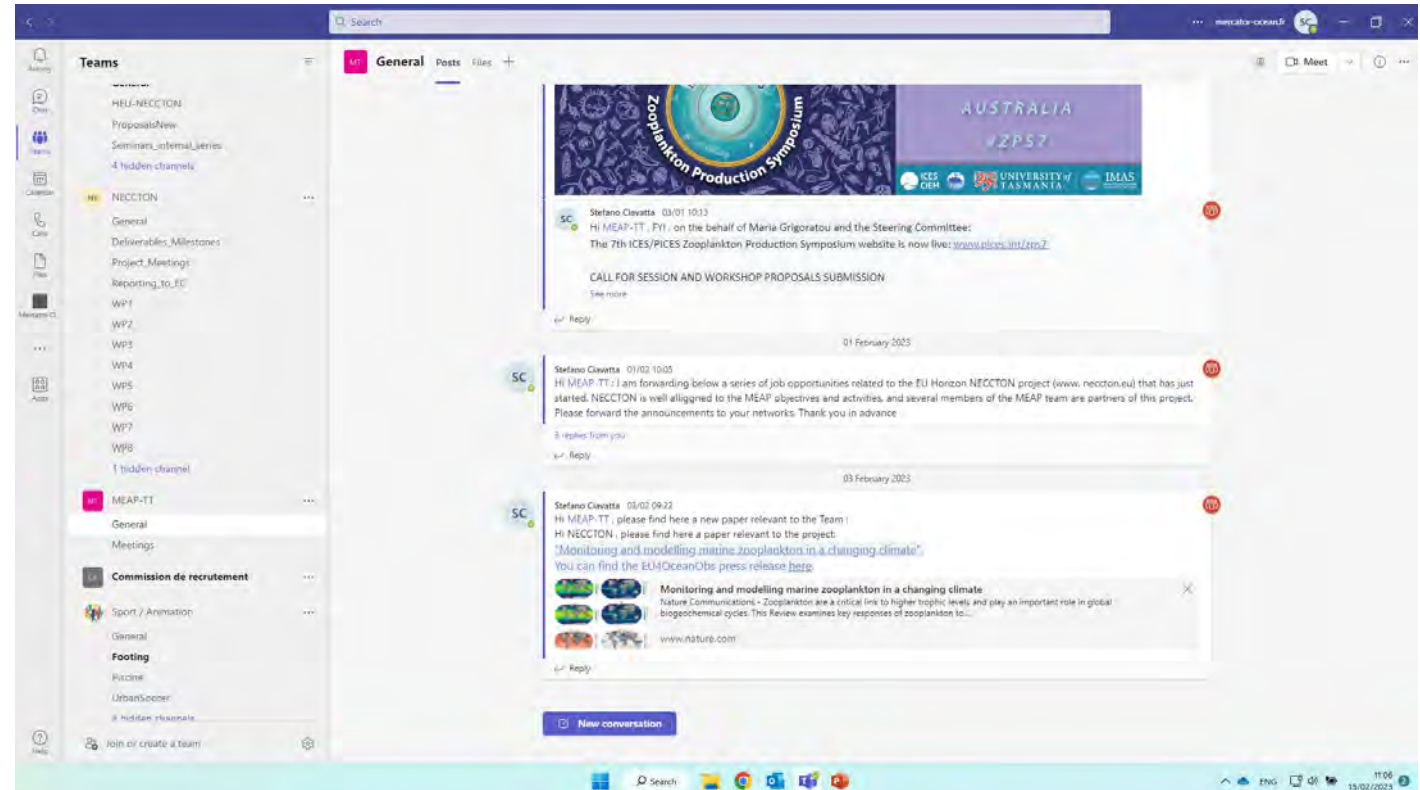

Fennel et al. (2019) <https://doi.org/10.3389/fmars.2019.00089>

## Networking, sharing, discussions, contributions

### Active Microsoft Team Group

- Channels for sharing presentations, MEAP papers, other relevant papers and documents
- Chats on news, scientific challenges, job opportunities

## Networking, sharing, discussions, contributions

### Active Microsoft Team Group

- Channels for sharing presentations, MEAP papers, other relevant papers and documents
- Chats on news, scientific challenges, job opportunities

### Monthly scientific meetings

- 1<sup>st</sup> Wednesday of the month 14 UTC
- Hands-on training workshop on SEAMLESS Ensemble and Assimilation Tool  
([https://seamlessproject.org/SEAMLESS\\_EAT](https://seamlessproject.org/SEAMLESS_EAT))

Seminars	Date	Topic
MEAP-TT online seminar 6	31 oct 2023	Machine Learning for Multivariate Data Assimilation in Biogeochemical Models
MEAP-TT online seminar 5	4 Oct 2023	Science talk: Biogeochemical (BGC) Argo data calibrate model parameters and model parameterizations for simulating the biological carbon pump (Bin Wang, Dalhousie University)
MEAP-TT online seminar 4	6 Sep 2023	How including bio-optics improves biogeochemical models: present and future perspectives
MEAP-TT training workshop	5 July 2023	<u>Hands-on workshop on the use of the SEAMLESS prototype</u> ( <a href="https://seamlessproject.org/SEAMLESS_Prototype">https://seamlessproject.org/SEAMLESS_Prototype</a> )
MEAP-TT online seminar 3	1 June 2023	Carbon fluxes
MEAP-TT online seminar 2	3 May 2023	Ecosystem modelling (e.g., HTLs, habitats, ...)
MEAP-TT online seminar 1	1 Dec 2022	Integration of "new" observation in models

## Networking, sharing, discussions, contributions

### Active Microsoft Team Group

- Channels for sharing presentations, MEAP papers, other relevant papers and documents
- Chats on news, scientific challenges, job opportunities

### Monthly scientific meetings

- 1<sup>st</sup> Wednesday of the month 14 UTC
- Hands-on training workshop on SEAMLESS Ensemble and Assimilation Tool  
([https://seamlessproject.org/SEAMLESS\\_EAT](https://seamlessproject.org/SEAMLESS_EAT))

### Active collaborations

- Active MEAP collaborations in projects
  - e.g., SEAMLESS, NECCTON, EARTH-HK, other joint proposals under review)
- Active collaborations in dissemination activities
  - e.g. ETOOFS manual, IOCCP Annual meeting, OceanPredict DCC co-design meeting

### Contributions

- UN Decade initiatives
  - e.g., ForeSea SC, SynObs SC, Marine Life 2030, GOOS co-design
  - Together with NOC, UK Met Office and CEFAS, PML has submitted a pilot sites to the GlobalCoast survey of Coast Predict
- OceanPredict DCC SC

## Scientific results and dissemination (joint papers and reports):

- OSPAR QSR23 – Assessment of Ocean Acidification <https://oap.ospar.org/en/ospar-assessments/quality-status-reports/qsr-2023/other-assessments/ocean-acidification/>
- Primer article "Ocean biogeochemical modelling" in Nature Reviews Methods Primers by Fennel et al., <https://www.nature.com/articles/s43586-022-00154-2>
- Decrease in air-sea CO<sub>2</sub> fluxes caused by persistent marine heatwaves. *Nat Commun* **13**, 4300 (2022) by Mignot et al. <https://doi.org/10.1038/s41467-022-31983-0>
- "A solution for autonomous, adaptive monitoring of coastal ocean ecosystems: Integrating ocean robots and operational forecasts" in *Front. Mar. Sci.* by Ford et al., <https://doi.org/10.3389/fmars.2022.1067174>
- "Evaluation of biogeochemical models performance and recommendation on observing system design using an unsupervised machine learning algorithm, BGC-Argo floats and assessment metrics", Mignot et al., *Biogeosciences*, <https://doi.org/10.5194/bg-2021-2>
- Observability of the target indicators in the 3D CMEMS MFC systems (D3.4), Brasseur et al., Deliverable report of project H2020 SEAMLESS (grant 101004032.). doi: [10.5281/zenodo.7584865](https://doi.org/10.5281/zenodo.7584865)
- Review paper on "Persistent eutrophication and hypoxia in the coastal ocean", Cambridge Prisms: Coastal Futures, by Dai et al., <https://doi.org/10.1017/cft.2023.7>
- ...

## New & on-going projects

- Ocean Alk-align project (funded by Additional Ventures, US\$11M for 5 years, lead PI: Fennel)
  - focussed on ocean alkalinity enhancement as a mCDR technology
- EARTH-HK project (funded by Hong Kong Research Grants Council, US\$ 11M for 2024-2028)
  - aiming at building a digital twin Regional Earth System to support sustainable development under climate change
- Current CoCO2 project (funded by European H2020 program)
  - aiming at building up the next Copernicus CO<sub>2</sub> Monitoring Service
- Mission Atlantic (Horizon Europe 2020-2025) (<https://missionatlantic.eu/>)
  - map and assess the present and future status of Atlantic marine ecosystems under the influence of climate change and exploitation.
- Horizon Europe project Ocean-ICU (<https://ocean-icu.eu/>)
  - produce new data, information and understanding on the role of the Ocean in the global carbon cycle
- H2020 SEAMLESS project (2021-2023)
- Horizon Europe NECCTON project (2022-2025)

# SERVICES BASED ON ECOSYSTEM DATA ASSIMILATION: ESSENTIAL SCIENCE AND SOLUTIONS (SEAMLESS)

## Partners

## Advisory board

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 101004032.

- 1. New ensemble generation and data assimilation methods (WP3, P Brasseur, UGA)**  
to maximize the flow of information from the new observing networks towards the controllable ecosystem indicators
- 2. Coupled assimilation of physical and biogeochemical data (WP4, L Bertino, NERSC)**  
to improve the consistency of the biogeochemical and physical simulations
- 3. Coupled assimilation of remote sensing & in situ biogeochemical data (WP5, Cossarini, OGS)**  
to link the surface and subsurface ecosystem dynamics
- 4. Coupled assimilation for joint state-parameter estimation (WP6, J Skakala)**  
to improve the models and their simulation of biogeochemical indicators

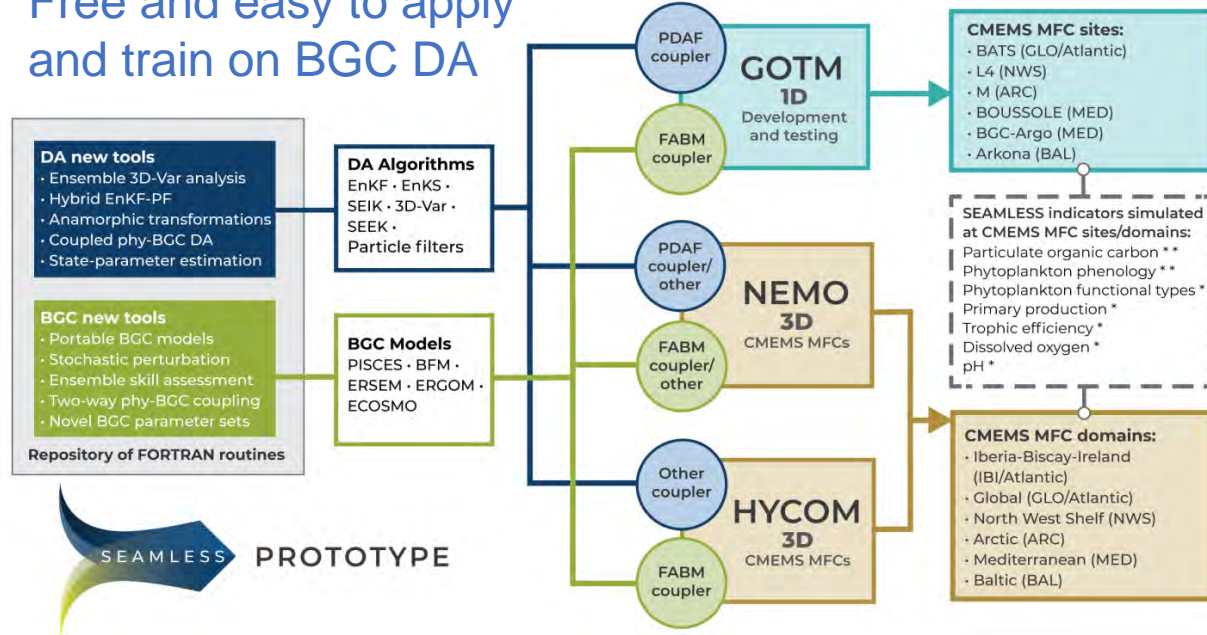

**BGC models:** PISCES, ERSEM, BFM,  
ECOSMO, ERGOM, [BAHMBI]

# SEAMLESS Prototype

## Ensemble and Assimilation Tool (EAT)

Free and easy to apply and train on BGC DA

Organized a training session for MEAP Task-Team in July 2023

Organize a training session for Early Career Researchers in North African Countries, in collaboration with MONGOOS, Morocco, 16 November 2023

Next generation of ocean scientists and assimilators

# SEAMLESS (almost) final recommendations (and wait for the roadmap 4CMEMS)

1. **We recommend to fix the model first.** Improve parameterisation and representation of the processes that drive your indicators: ensemble DA might exasperate systematic biases
2. **We advocate for enhanced BGC observation platforms/networks/services** to provide more (both quantity and variety) and quality assured BGC data for assimilation and validation of both outputs and derived indicators: biogeochemical-ARGO floats, BGC gliders, geo-stationary ocean colour satellite, plankton automated observations (videocam, acoustic)
3. **We endorse the use of ensemble BGC DA** approaches because they: (i) enable the representation and use of model uncertainty, (ii) provide means to evaluate the controllability of indicators (iii) provide metrics to evaluate the performance of DA systems
4. **We promote dedicated funding and research on coupled BGC DA** (physics and BGC, in situ and satellite, state and parameter estimation) with the novel ensemble methods and tools (EAT) developed by SEAMLESS
5. **We recommend to use SEAMLESS EAT** to analyse the sensitivity, tune, compare and train BGC DA methods, set-ups, strategies.

*Ciavatta et al., in preparation*

# NECCTON

NEW COPERNICUS  
CAPABILITY FOR TROPHIC  
OCEAN NETWORKS

Transforming the European capability to predict  
and protect the biodiversity of marine  
ecosystems

Stefano Ciavatta, project lead

This project has received funding from Horizon Europe RIA under Grant Number 101081273

# Key-facts

- Copernicus evolution project
- Duration: 4 years (Jan 2023-Dec 2026)
- Budget: 10M Eur
- Coordination: S Ciavatta - Mercator Ocean international
- Management: J Heard – Plymouth Marine Laboratory
- Partners: 23

CMEMS BEFORE  
NECCTON

BIOGEOCHEMISTRY  
AND LOWER TROPHIC  
LEVEL

GREEN OCEAN

- Nekton
- Plankton
- Organic Carbon
- Nutrients
- Oxygen
- Carbonate System
- Optics
- Others

# NECCTON's overall objective

To enable the Copernicus Marine Service to deliver new modelling products for the green ocean: fishes, pollution and benthic habitats

# The 25 26 NECCTON products

## Pelagic Biogeochemistry

- Mesozooplankton biomass
- Micronekton biomass
- Suspended particulate matter (SPM)
- POM (Particulate Organic Matter)
- DOM (Dissolved Organic Matter)
- Reflectance

## Benthic

- Oxygen near bottom
- pH near bottom
- Light at bottom
- Carbon flux to bottom
- Carbon in sediment
- Macrozoobenthos
- Benthic flora

+ sedimentary rates (C burial and denitrification)

## Nekton

- Small pelagic biomass
- Apex predator
- Marine mammals
- Unspecified fish and biomass
- Higher Trophic Level Habitat

+ demersal fish

## Stressors

- Plastic
- Persistent Organic Pollutants
- Mercury
- Oil
- Fisheries pressure
- Climate change stressor index
- Multi-stressor index

**OBSERVATIONS**  
In-situ and satellites

**MODELS**  
Assimilation and ML

**HINDCASTS**  
Decadal

**PROJECTIONS**  
Multi-decadal

44 datasets

MEAP-TT, OPST-8, 6-10 November 2023

# Co-designing products: Stakeholder engagement (WP2)

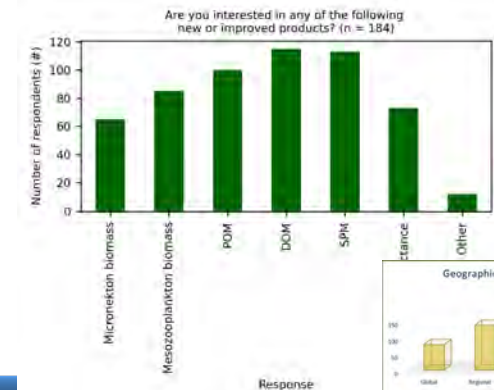

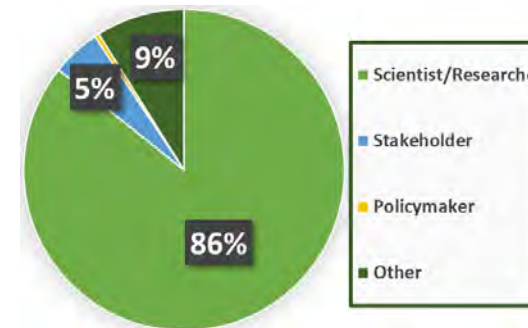

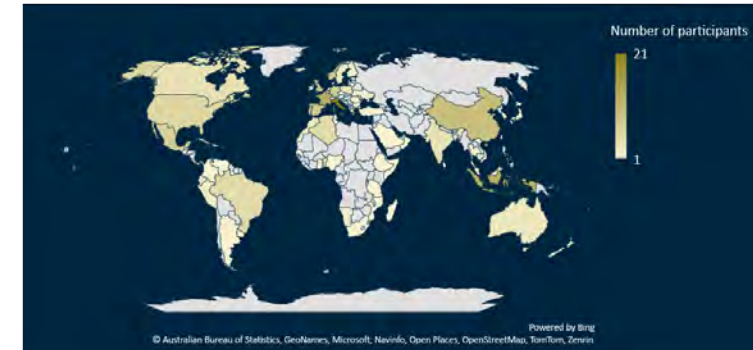

## NECCTON survey

- Opened from 17/07 to 08/09 with 3 reminders (sent to more than 4500 registered users)
- 224 participants
- 124 participants (>55%) agreed to be contacted and would like to receive information about NECCTON

- 2-day workshop
- **Target (KPI):** 100 participants (111 peak)
- Visuality was hired to assist us with the technical details and to bring new tools
- 2 rounds of 4 simultaneous parallel sessions
- Between 15 and 25 participants for each session
- 2 types of tools used: Slido and Mural
- Each WP leader worked with Visuality in the creative process

Watch the Plenary Session here:  
[NECCTON - New Copernicus Capability for Trophic Ocean Networks](#)

Page 3 of 3

Co-product ID	Co-product in bold and green shade
	<i>Sub-variable in bold and italic</i>
<b>14.1</b>	<b>Small pelagic biomass</b>
Sub-variable name [unit]	<b><i>Anchovy adults biomass</i></b> [gWW/m <sup>2</sup> ]
Description	Average monthly spatial biomass distribution of European anchovy <i>Engraulis encrasicolus</i> .
Long name	Anchovy <b><i>adults</i></b> biomass distribution per square kilometre
Short name	<b><i>Anchovy biom</i></b>
Standard name	mass_content_of_anchovy_adults_expressed_as_wet_weight_in_sea_water
Sub-variable name [unit]	<b><i>Anchovy adults age 1 biomass</i></b> [gWW/m <sup>2</sup> ]
Description	Average monthly spatial biomass distribution of European anchovy <i>Engraulis encrasicolus</i> (adults <b><i>age 1</i></b> group)
Long name	Anchovy adults <b><i>age 1</i></b> group biomass distribution per square kilometre
Short name	<b><i>Anchovy_adults_age_1_biom</i></b>
Standard name	mass_content_of_anchovy_adults_age_1_expressed_as_wet_weight_in_sea_water

**Vision: leading an international effort to expand standards for marine ecosystem model products**

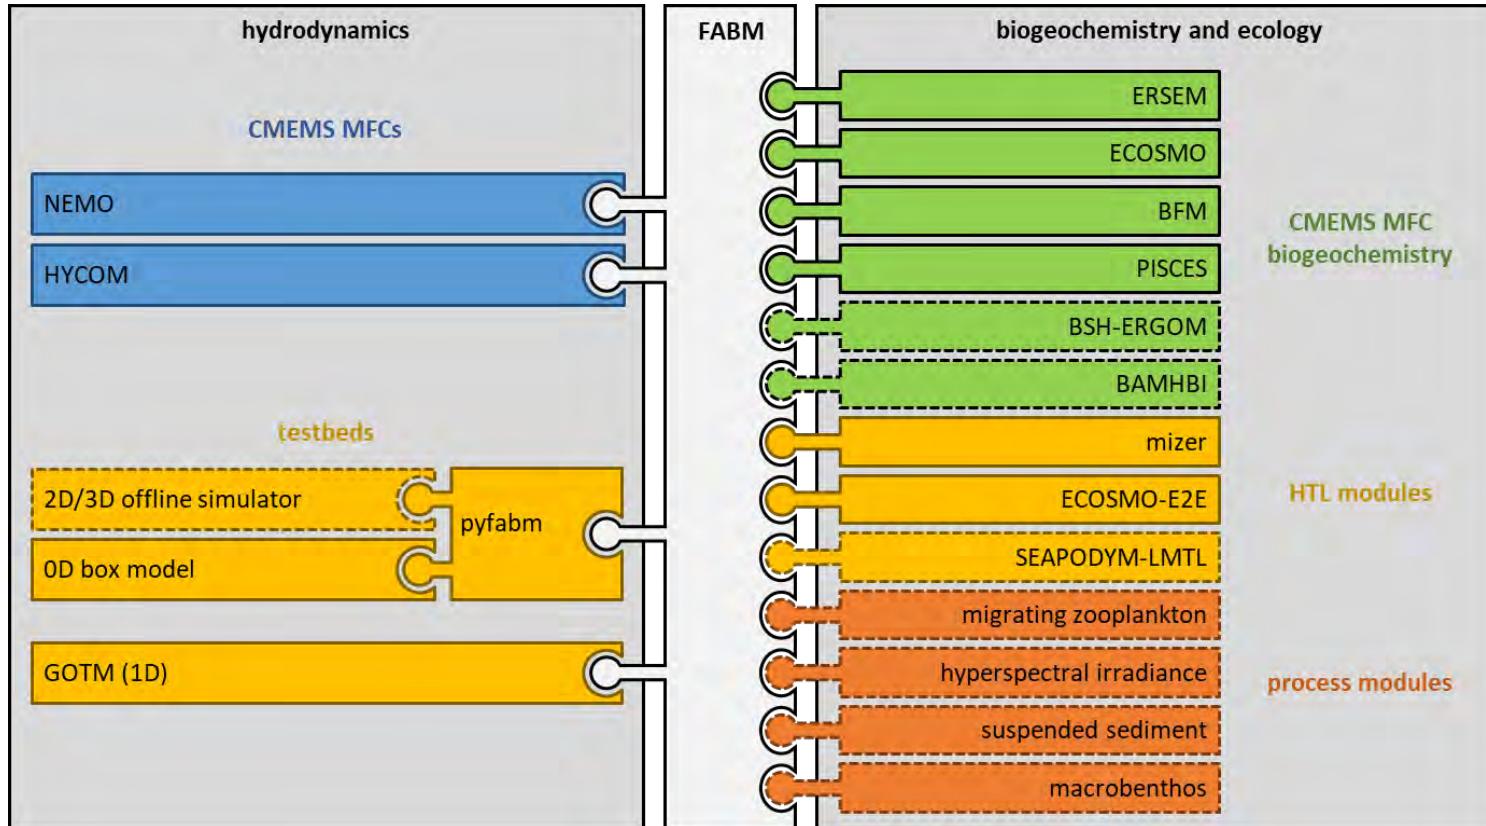

## 4.4 H10 – Mediterranean Sea

ID dataset	H10
Products names (product IDs)	Small pelagic biomass (14.9), Large pelagics (15.5), Unspecified fish biomass (17.10), Demersal fish biomass (27.4)
Name sub-variables	<b><i>small pelagic biom</i></b> , <b><i>small pelagic SSB</i></b> , <b><i>small pelagic feeding level</i></b> , <b><i>small pelagic average adult weight</i></b> , <b><i>small pelagic average maturity flux</i></b> , <b><i>small pelagic predation mortality</i></b> , <b><i>large pelagic biom</i></b> , <b><i>large pelagic SSB</i></b> , <b><i>large pelagic feeding level</i></b> , <b><i>large pelagic average adult weight</i></b> , <b><i>large pelagic average maturity flux</i></b> , <b><i>large pelagic predation mortality</i></b> , <b><i>total fish biom</i></b> , <b><i>total fish SSB</i></b> , <b><i>total pelagic average maturity flux</i></b> , <b><i>demersal fish biom</i></b> , <b><i>demersal fish SSB</i></b> , <b><i>demersal fish feeding level</i></b> , <b><i>demersal fish average adult weight</i></b> , <b><i>demersal fish average maturity flux</i></b> , <b><i>demersal fish predation mortality</i></b>
Geographical coverage	MED
Horizontal resolution	1/24 deg
Vertical resolution	none
Time period	2011-2020
Temporal resolution	Annual
Format	netCDF
Partner producer and contact	DTU Aqua, Ken H Andersen
Datasets used for calibration/validation/assimilation	A set of model parameters has been calibrated to observational estimates of peak catches in large marine ecosystems by implementing a fishing mortality that approximates maximum sustainable yield
Method	One-way coupled FEISTY
Name of output file(s)	FEISTY_NWS
Expected total max size of the data	1 Gb

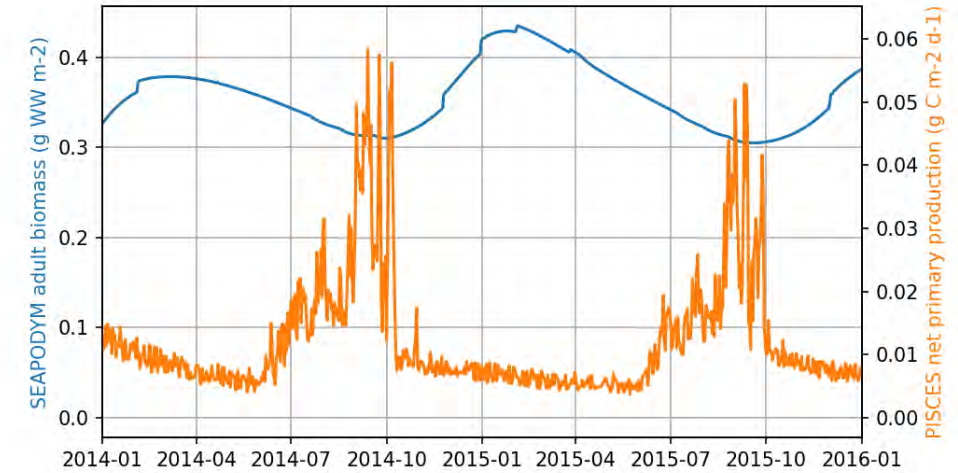

- Specification Sheets of the Essential Ocean Variables, defined by the Expert Panels of the Global Ocean Observing System (GOOS)
- New CF metadata convention propositions
- Engagement of experts from AB and international programmes and projects (e.g. FishMIP, Marine Life 2030, H2020 EcoScope, ...)
- Feedback to G7 FSOI, EU4OceanObs, ECOTIP

# Developing a shared modelling framework

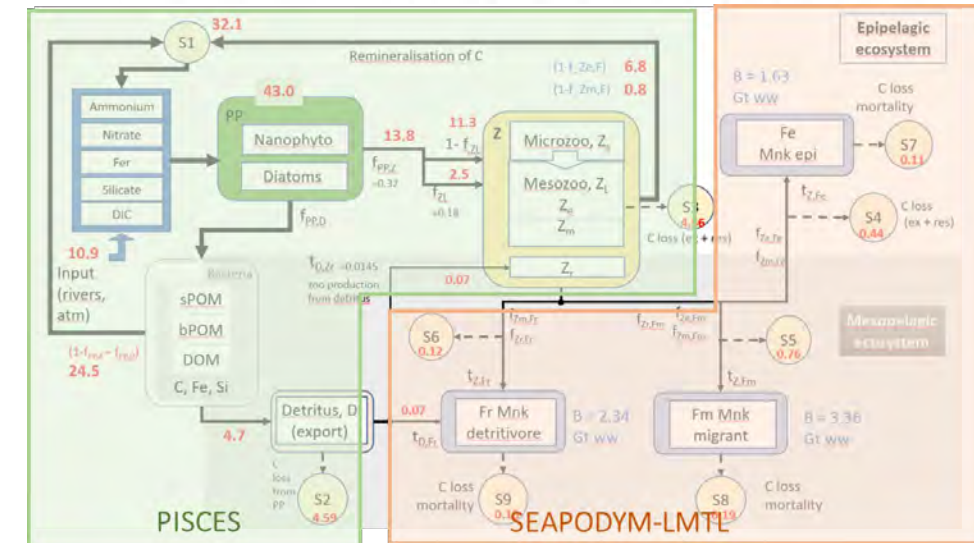

PISCES + SEAPODYM micronekton

## FABM: Framework for aquatic biogeochemical modelling

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 101004032.

# Study of the **regional earth system (RES)** for sustainable development under climate change in the Greater Bay Area

The Hong Kong University of  
Science and Technology  
(HKUST)

Donald Anderson (WHOI)

Sean Crowe (UBC)

Dale Durran (U of Washington)

Katja Fennel (Dalhousie)

Jim McWilliams (UCLA)

Matthias Peichl (SLU)

# Study of the regional earth system (RES) for sustainable development under climate change in the Greater Bay Area

Land-Ocean-Atmosphere in the Greater Bay Area

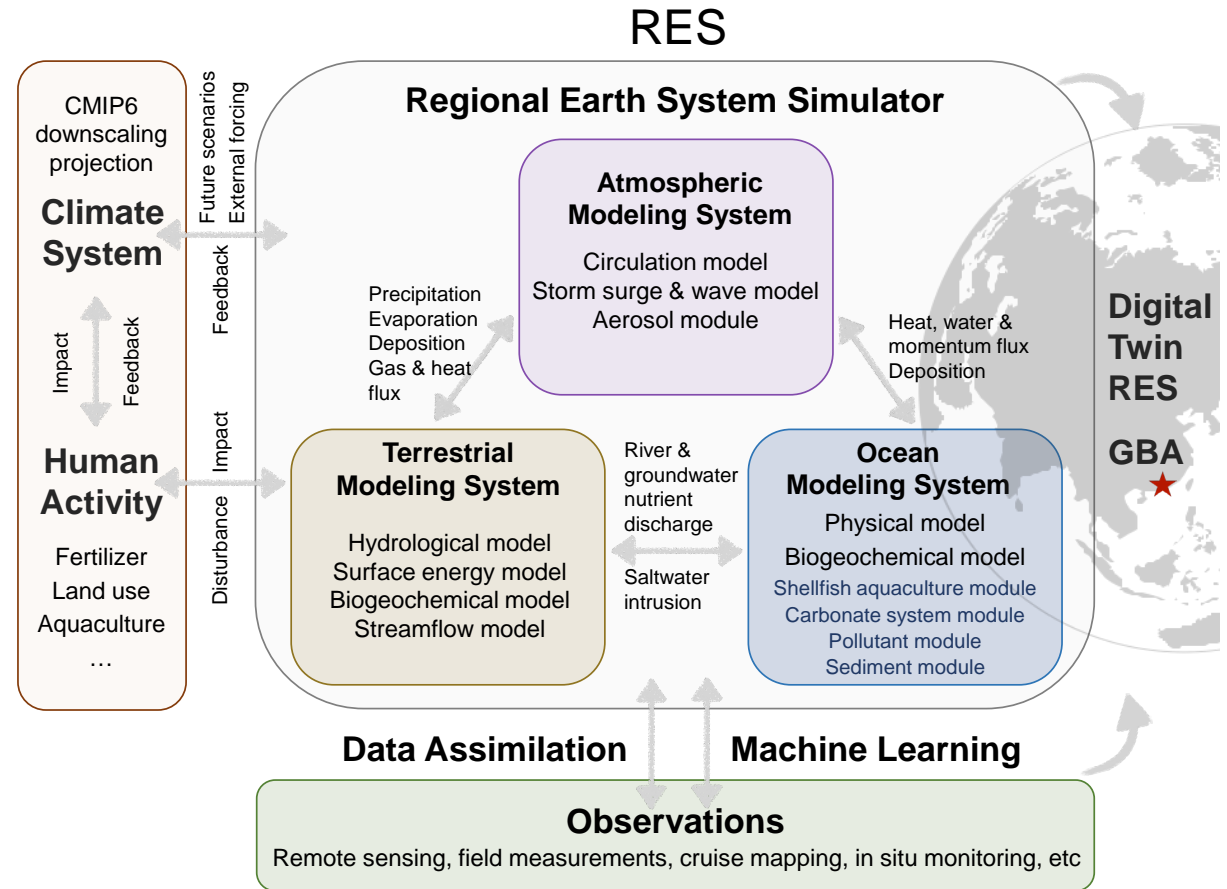

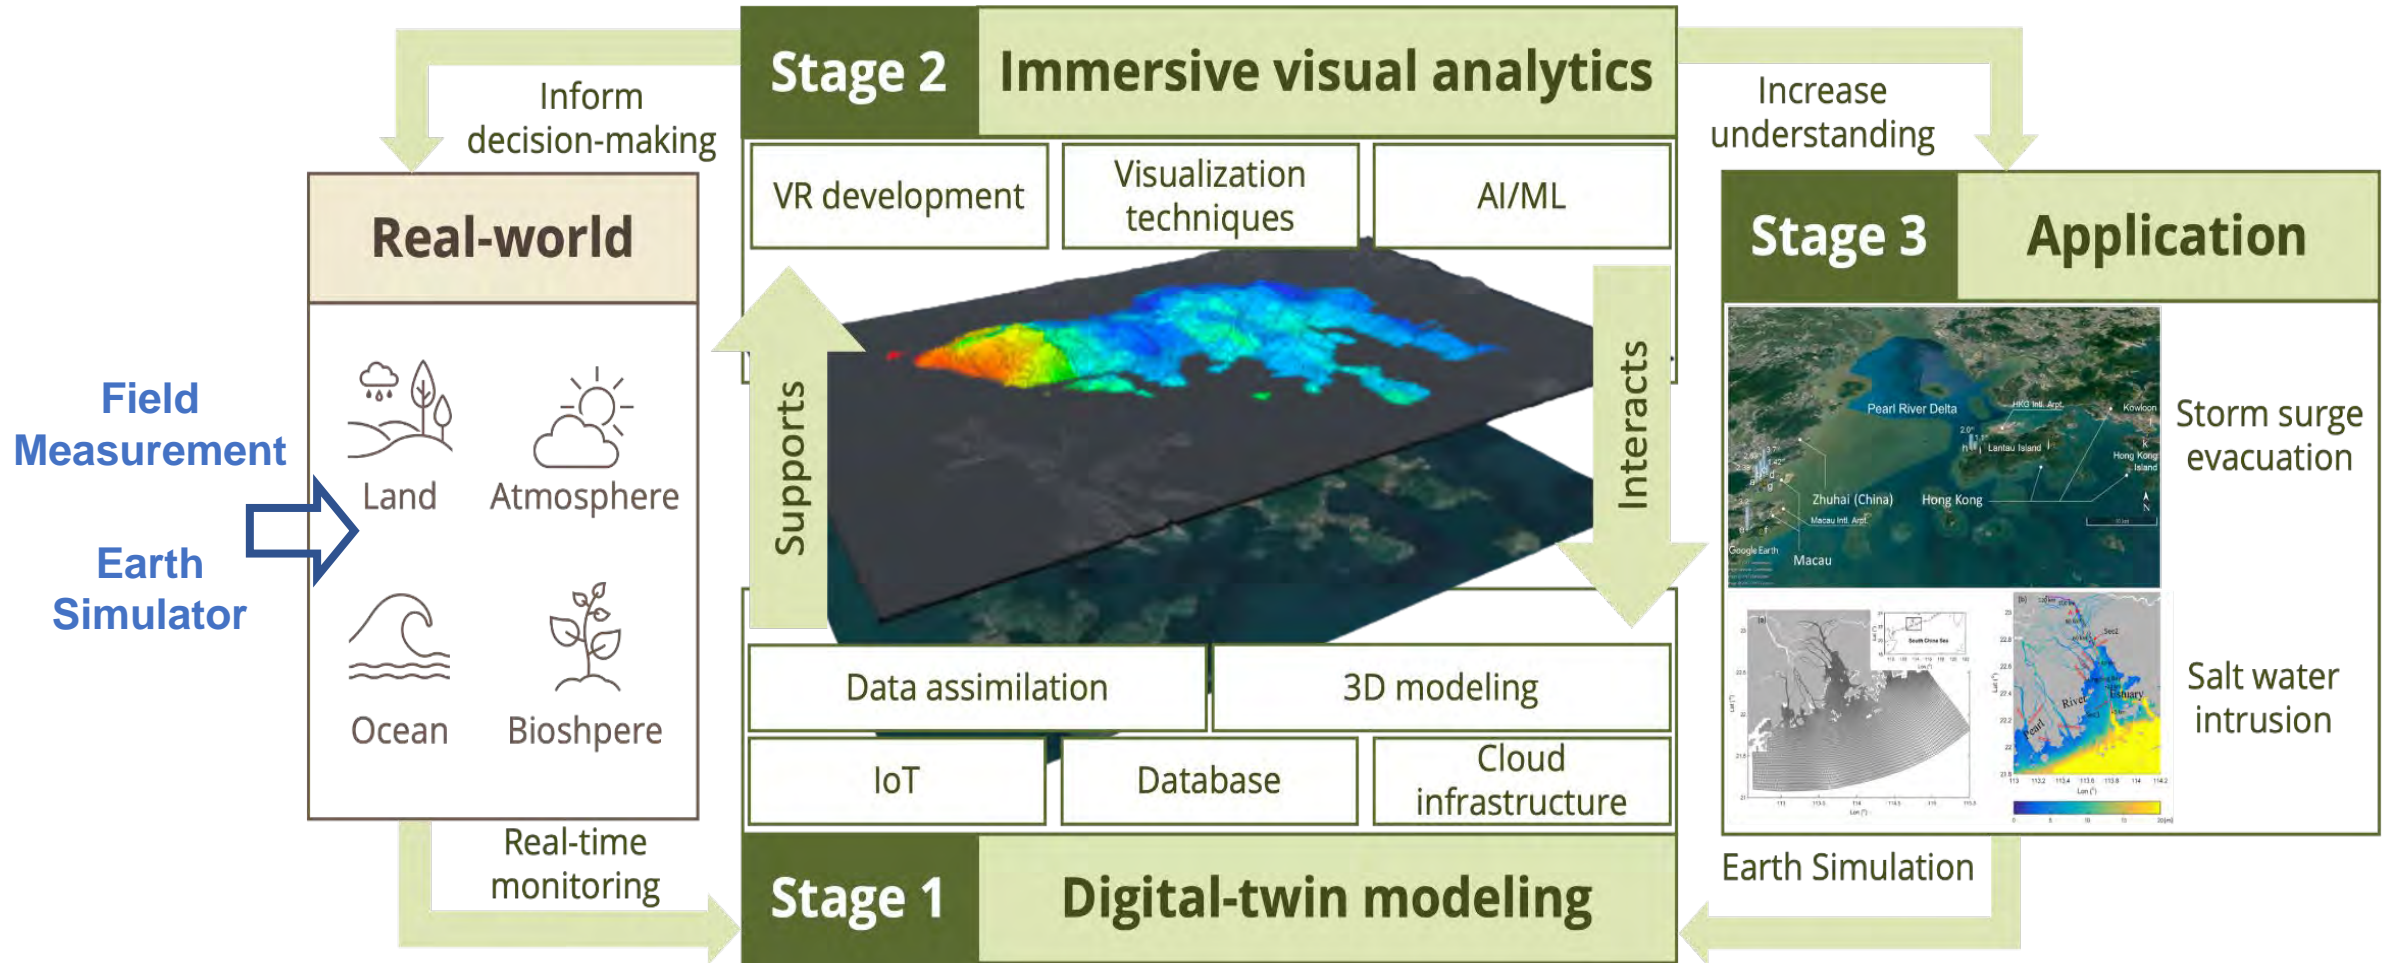

## Mission

provide science-based understanding, planning and mitigation strategies and solutions through a *digital twin* to subsequently safeguarding environmental sustainability and resilience against human activities and climate change in the Guangdong-Hong Kong-Macao Greater Bay Area (GBA).

## Goals

- Investigate integrated terrestrial (river basin), oceanic, and atmospheric processes that govern the cross-sphere exchanges of material and energy in the RES.
- Diagnose the human activities and climate change and their interaction with the natural ecosystem of the GBA via a *human-RES integrated assessment framework*.
- Assess and quantify the key processes, environmental hazards, and their future trends and the underlying mechanisms across time and space in the GBA using the *digital twin*.

## Remarkable engagements of stakeholders and working groups

**KCEO STAKEHOLDER WORKSHOP ON BIODIVERSITY AND EARTH OBSERVATION**  
16 NOVEMBER 2022

The Copernicus Marine Service for biodiversity policy: the future

Major evolutions planned in Copernicus 2 (2023-2028) via R&D projects (Horizon) will expand marine biodiversity monitoring and protection supporting EU policy needs

- ✓ Gathering and processing new biogeochemical and biologic and satellite observations
- ✓ New processes in biogeochemical models (biofilm, bivalve coupling, thermal inputs)
- ✓ Advanced data assimilation techniques (e.g., stochastic BCC ensemble)
- ✓ Ecosystem modelling from low (satellite, moil) to mesoscale (to high (HR) trophic levels)
- ✓ Indicators for key protected species (e.g. marine mammals), Marine Protected Areas design
- ✓ Assessing scenarios for climate change impacts on stocks and protected species
- ✓ Critical role of present (SE, SRS) and future (CHAM2) satellite missions and in-situ observations (e.g. acoustic data, satellite imaging, optics, satellites, gliders, fish surveys and landings)
- ✓ Copernicus Thematic Hubs for (1) the Coastal Zones and (2) Arctic sea-ice target biodiversity in critical areas
- ✓ Digital Twin of the Oceans (DTO) includes ecosystem models and data, MFA DTS, what if scenarios

Towards a sustained global observation network for marine biogeochemistry

**Impact!**

Based on results by A Rochner (U Exeter) & D Ford (Met Office)

IOCCP will run an intercomparison between carbonate products from floats and ships

Logos: IOCCP, SCOR

## Remarkable engagements of stakeholders and working groups

- 2 training workshops in Ocean-ICU project
  - Introduction to a range of biogeochemical models including ERSEM,
  - 'hands-on' workshop and included MOPS, BFM and ERSEM.
    - Target audience: non modellers
    - Aim: familiarise non-modellers with models and encourage collaboration in order to include processes of interest.
- 1 training workshop in MEAP-TT
  - Introduction to SEAMLESS Ensemble and Assimilation Tool (EAT)
  - 'hands-on' workshop

- Plan as part of UKCMAS/NCEO to develop AMM15 high-resolution biogeochemical "operational" capacity for the North West Shelf (led by PLM)
- Collaborate with Indonesian ocean institutes and UNEP (UN Environment Programme) to conduct comparative analysis of typical coastal ecosystems in China and Indonesia. (led by HKUST)
- ...
- Organize an in-person meeting
  - AMEAR 2024 (Plymouth UK, 8-11 July 2024) or OceanPredict Symposium 2024 (Paris, 18-22 Nov 2024)
- “Refresh” membership, strengthening internal collaborations (new projects)
- Strengthening the “higher-trophic-level component” of MEAP
- Expanding the remit to include AI/ML (e.g. marine ecosystem emulators, digital twins, what-if-scenarios, DA)
- Working more closely with UN Decade (e.g., submitted application for Marine Life 2030 for endorsement of NECCTON, contribution to OceanPredict DCC co-design, ...)

Thank you!
