

# SynObs web meeting

27 January 2026

14:00 UTC

Attendance: SynObs project members

## Agenda

1. Activities since last meeting
2. Introduction of SynObs & Ocean Observing Co-design International Workshop
3. Current status of the flagship OSE
4. How do we coordinate the analysis of the flagship OSE?
5. Discussion on future activities.

## Discussion

- We will put a simple data catalogue on the top of the flagship OSE database. Content of data and the e-mail of the data provider contacts are included in the catalogue.
- It is possible to share the google drive in which past SynObs document and presentation is saved.
- We will submit the international workshop report to BAMS and also write a draft the activity summary paper to another journal.
- We need special care to provide NO US Argo results.
- Some members have already supported to distribute the SynObs flagship OSE data.
- Some members have started data analysis.
- Some additional experiments are on-going in some data providers
- Some data provider may be able to provide additional paper. Please mail to SynObs office or data provider contact if you have request of additional data.
- To extend the OSEs using the totally same system may be difficult for some data providers. In that case, it may be OK to extend the OSEs using the updated system (we need to discuss)?
